# Short Equational Bases for Ortholattices: Proofs and Countermodels

*W. McCune\**

*R. Padmanabhan†*

*M. A. Rose‡*

*R. Veroff§*

## Abstract

This document contains proofs and countermodels in support of the paper “Short Equational Bases for Ortholattices”, by the same set of authors. In that paper, short single axioms for ortholattices, orthomodular lattices, and modular ortholattices are presented, all in terms of the Sheffer stroke. The ortholattice axiom is the shortest possible. Other equational bases in terms of the Sheffer stroke and in terms of join, meet, and complement are presented. Computers were used extensively to find candidates, reject candidates, and search for proofs that candidates are single axioms.

## 1 Introduction

This report supports the (primary) paper “Short Equational Bases for Ortholattices” and the Web page *Short Equational Bases for Ortholattices: Web Support* [9]. The primary paper is essentially an extended abstract intended for a wide audience, the Web page is intended for immediate support, and this report is intended for archival support.

The overall structure of the three documents is similar, with the same section titles (even when the sections are empty). The primary paper contains no proofs, countermodels, or filters. The Web page contains proofs, countermodels, filters, and information on the software and methods used. This report contain the proofs, countermodels, and filters.

## 2 Equational Bases

First we define a chain of varieties from lattices to Boolean algebra in terms of join, meet, and complement. Then we go from ortholattices to Boolean algebra in terms of the Sheffer stroke.

### 2.1 In Terms of Join/Meet/Complement

This section contains multiequation bases, in terms of join, meet, and complement, for lattices ( $\mathcal{L}$ ), ortholattices ( $\mathcal{OL}$ ), orthomodular lattices ( $\mathcal{OML}$ ), modular ortholattices ( $\mathcal{MOL}$ ), and Boolean algebra ( $\mathcal{BA}$ ). This development is not far from a standard development; and in the cases where it does depart, we prove the corresponding theorems and other theorems that may be of interest. For example, our basis for lattice theory does not contain commutativity, so we prove it; and we use a nonstandard modularity axiom, so we prove it equivalent (given

†Supported by an operating grant from NSERC of Canada, grant #8215-02.

‡Supported by the Division of Educational Programs, Argonne National Laboratory.

§Supported by National Science Foundation grant CDA-9503064.

lattice theory) to the standard axiom. Note that each of the bases for  $\mathcal{OL}$ ,  $\mathcal{OML}$ ,  $\mathcal{MOL}$ , and  $\mathcal{BA}$  contains the equation  $x \wedge y = c(c(x) \vee c(y))$ , which allows us, if we wish, to rewrite the bases to be in terms of join and complement only.

Also, with the exception of  $\mathcal{BA}$ , we prove independence of the bases by giving countermodels found by Mace2. Many of the independence proofs are trivial, and we could give arguments without the help of Mace2, but we have included the Mace2 countermodels to emphasize the “automatic” nature of the work.

### 2.1.1 Lattice Theory

The following is a 4-basis for lattice theory ( $\mathcal{L}$ ) in terms of join ( $\vee$ ) and meet ( $\wedge$ ).

$$\begin{array}{ll} x \vee (y \vee z) = y \vee (x \vee z) & \% \text{ AJ} \\ x \wedge (y \wedge z) = y \wedge (x \wedge z) & \% \text{ AM} \\ x \vee (x \wedge y) = x & \% \text{ B1} \\ x \wedge (x \vee y) = x & \% \text{ B2} \end{array}$$

Note that this basis is self-dual; that is, the dual of each member is also a member.

A more standard basis for lattice theory is the 6-basis (also self-dual) consisting of B1, B2, and the commutativity and associativity of meet and join. Deriving commutativity of join (or of meet) from the 4-basis above shows that it is equivalent to the 6-basis. The following is an Otter proof of commutativity (idempotence is also proved).

#### Proof LT1

1	$A \vee B \neq B \vee A \mid \$Ans(CJ)$	[]
2	$A \vee A \neq A \mid \$Ans(IJ)$	[]
4	$x \vee (y \vee z) = y \vee (x \vee z)$	[]
5	$x \wedge (y \wedge z) = y \wedge (x \wedge z)$	[]
6	$x \vee (x \wedge y) = x$	[]
8	$x \wedge (x \vee y) = x$	[]
12	$x \vee (y \vee (x \wedge z)) = y \vee x$	[6 $\rightarrow$ 4]
14	$x \wedge x = x$	[6 $\rightarrow$ 8]
18	$x \vee x = x$	[8 $\rightarrow$ 6]
20	$\$Ans(IJ)$	[18,2]
21	$x \wedge (y \wedge x) = y \wedge x$	[14 $\rightarrow$ 5]
74	$x \vee (y \wedge x) = x$	[21 $\rightarrow$ 6]
169	$x \vee y = y \vee x$	[74 $\rightarrow$ 12]
170	$\$Ans(CJ)$	[169,1]

The following two Mace2 jobs show independence of the  $\mathcal{L}$  4-basis  $\{\text{AJ}, \text{AM}, \text{B1}, \text{B2}\}$ .

#### Countermodel LTa

$$\begin{array}{ll} x \wedge (y \wedge z) = y \wedge (x \wedge z). & \% \text{ AM} \\ x \vee (x \wedge y) = x. & \% \text{ B1} \\ x \wedge (x \vee y) = x. & \% \text{ B2} \\ A \vee (B \vee C) != B \vee (A \vee C). & \% \text{ denial of AJ} \end{array}$$

C: 0	B: 0	A: 1	$\wedge:$	<table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td>0</td><td>0</td><td>1</td></tr> <tr><td>0</td><td>0</td><td>0</td></tr> <tr><td>1</td><td>0</td><td>1</td></tr> </table>	0	0	1	0	0	0	1	0	1	$\vee:$	<table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td>0</td><td>0</td><td>1</td></tr> <tr><td>0</td><td>0</td><td>0</td></tr> <tr><td>1</td><td>1</td><td>1</td></tr> </table>	0	0	1	0	0	0	1	1	1
0	0	1																						
0	0	0																						
1	0	1																						
0	0	1																						
0	0	0																						
1	1	1																						

Table 1: LTa.out

**Countermodel LTb**

```

x v (y v z) = y v (x v z).      % AJ
x ^ (y ^ z) = y ^ (x ^ z).      % AM
x ^ (x v y) = x.                % B2
A v (A ^ B) != A.              % denial of B1

```

B: 0	A: 1	$\vee:$	<table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td>0</td><td>0</td><td>1</td></tr> <tr><td>0</td><td>0</td><td>0</td></tr> <tr><td>1</td><td>0</td><td>0</td></tr> </table>	0	0	1	0	0	0	1	0	0	$\wedge:$	<table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td>0</td><td>0</td><td>1</td></tr> <tr><td>0</td><td>0</td><td>1</td></tr> <tr><td>1</td><td>1</td><td>0</td></tr> </table>	0	0	1	0	0	1	1	1	0
0	0	1																					
0	0	0																					
1	0	0																					
0	0	1																					
0	0	1																					
1	1	0																					

Table 2: LTb.out

**2.1.2 Ortholattices**

The following is a 5-basis for ortholattices ( $\mathcal{OL}$ ) in terms of join ( $\vee$ ), meet ( $\wedge$ ), and complement ( $c$ ).

$$\begin{aligned}
x \vee (y \vee z) &= y \vee (x \vee z) && \% AJ \\
x \vee (x \wedge y) &= x && \% B1 \\
x \wedge y &= c(c(x) \vee c(y)) && \% DM \\
c(c(x)) &= x && \% CC \\
x \vee c(x) &= y \vee c(y) && \% ONE
\end{aligned}$$

If we start with the lattice theory 4-basis  $\{\text{AJ}, \text{AM}, \text{B1}, \text{B2}\}$  and restrict that to the ortholattices by adding  $\{\text{DM}, \text{CC}, \text{ONE}\}$ , then AM and B2 become dependent. The following are Otter proofs.

**Proof OL1**

1	$x = x$	[]
2	$x \vee (y \vee z) = y \vee (x \vee z)$	[]
6,5	$x \wedge y = c(c(x) \vee c(y))$	[]
8,7	$c(c(x)) = x$	[]
10	$A \wedge (B \wedge C) \neq B \wedge (A \wedge C) \mid \$Ans(\text{AM})$	[]
11	$c(c(B) \vee (c(A) \vee c(C))) \neq c(c(A) \vee (c(B) \vee c(C))) \mid \$Ans(\text{AM})$	[10,6,6,8,6,6,8]
45	$c(c(A) \vee (c(B) \vee c(C))) \neq c(c(A) \vee (c(B) \vee c(C))) \mid \$Ans(\text{AM})$	[2 → 11]
46	$\$Ans(\text{AM})$	[45,1]

**Proof OL2**

1	$x = x$	[]
3	$x \vee (x \wedge y) = x$	[]
6,5	$x \wedge y = c(c(x) \vee c(y))$	[]
8,7	$c(c(x)) = x$	[]
10	$A \wedge (A \vee B) \neq A \mid \$Ans(\text{B2})$	[]

11	$c(c(A) \vee c(A \vee B)) \neq A \mid \$Ans(B2)$	[10,6]
12	$x \vee c(c(x) \vee c(y)) = x$	[3:6]
33	$x \vee c(c(x) \vee y) = x$	[7 → 12]
50,49	$c(x) \vee c(x \vee y) = c(x)$	[7 → 33]
53	$A \neq A \mid \$Ans(B2)$	[11:50,8]
54	$\$Ans(B2)$	[53,1]

The following Mace2 jobs show that the  $\mathcal{OL}$  5-basis  $\{\text{AJ}, \text{B1}, \text{DM}, \text{CC}, \text{ONE}\}$  is independent.

### Countermodel OLa

```

x v (x ^ y) = x.                      % B1
x ^ y = c(c(x) v c(y)).                % DM
c(c(x)) = x.                          % CC
x v c(x) = y v c(y).                  % ONE
A v (B v C) != B v (A v C).        % denial of AJ

```

Table 7: OLe.out

### 2.1.3 Orthomodular Lattices

The following is a 4-basis for orthomodular lattices ( $\mathcal{OML}$ ) in terms of join ( $\vee$ ), meet ( $\wedge$ ), and complement ( $c$ ).

```

x v (y v z) = y v (x v z)    % AJ
x v (x ^ y) = x.                % B1
x ^ y = c(c(x) v c(y))        % DM
x v (c(x) ^ (x v y)) = x v y % OM

```

If we add the orthomodular law OM to the ortholattice 5-basis  $\{\text{AJ}, \text{B1}, \text{DM}, \text{CC}, \text{ONE}\}$ , then CC and ONE become dependent. The following is an Otter proof.

### Proof OML1

#### 2.1.4 Modular Ortholattices

The following is a 6-basis for modular ortholattices ( $\mathcal{MOL}$ ) in terms of join ( $\vee$ ), meet ( $\wedge$ ), and complement ( $c$ ).

$$\begin{array}{ll}
 x \vee (y \vee z) = y \vee (x \vee z) & \% \text{ AJ} \\
 x \vee (x \wedge y) = x & \% \text{ B1} \\
 x \wedge y = c(c(x) \vee c(y)) & \% \text{ DM} \\
 c(c(x)) = x & \% \text{ CC} \\
 x \vee c(x) = y \vee c(y) & \% \text{ ONE} \\
 x \vee (y \wedge (x \vee z)) = x \vee (z \wedge (x \vee y)) & \% \text{ MOD}
 \end{array}$$

This basis is simply our ortholattice 5-basis plus the modularity law MOD. The following Otter proof shows that the orthomodular law OM holds in  $\mathcal{MOL}$ .

### Proof MOL1

3	$x \vee (x \wedge y) = x$	[]
6,5	$x \wedge y = c(c(x) \vee c(y))$	[]
8,7	$c(c(x)) = x$	[]
9	$x \vee c(x) = y \vee c(y)$	[]
10	$x \vee (y \wedge (x \vee z)) = x \vee (z \wedge (x \vee y))$	[]
11	$x \vee c(c(y) \vee c(x \vee z)) = x \vee c(c(z) \vee c(x \vee y))$	[10,6,6]
12	$A \vee (c(A) \wedge (A \vee B)) \neq A \vee B \mid \$Ans(OM)$	[]
13	$A \vee c(A \vee c(A \vee B)) \neq A \vee B \mid \$Ans(OM)$	[12,6,8]
14	$x \vee c(c(x) \vee c(y)) = x$	[3:6]
18	$c(x) \vee x = y \vee c(y)$	[7 → 9]
19	$x \vee c(x) = c(y) \vee y$	[18]
40,39	$x \vee c(c(y) \vee y) = x$	[19 → 14]
50	$x \vee c(x \vee c(x \vee y)) = x \vee y$	[19 → 11,40,8,8]
52	$\$Ans(OM)$	[50,13]

A more common modularity law is

$$x \vee (y \wedge (x \vee z)) = (x \vee y) \wedge (x \vee z) \% MOD2$$

The following are Otter proofs that MOD and MOD2 are equivalent in lattice theory.

### Proof ML1

2	$x \vee (y \vee z) = y \vee (x \vee z)$	[]
3	$x \wedge (y \wedge z) = y \wedge (x \wedge z)$	[]
4	$x \vee (x \wedge y) = x$	[]
7,6	$x \wedge (x \vee y) = x$	[]
8	$x \vee (y \wedge (x \vee z)) = x \vee (z \wedge (x \vee y))$	[]
9	$A \vee (B \wedge (A \vee C)) \neq (A \vee B) \wedge (A \vee C) \mid \$Ans(MOD2)$	[]

Independence of the  $\mathcal{BA}$  4-basis  $\{\text{AJ}, \text{DM}, \text{ONE}, \text{CUT}\}$  is open. In particular, we have not been able to find a proof or countermodel of

$$\{\text{AJ}, \text{DM}, \text{CUT}\} \Rightarrow \text{ONE}.$$

The simplest multiequation basis we know of for  $\mathcal{BA}$  in terms of join and complement is the following, due to C. A. Meredith [13].

$$\begin{aligned} c(c(x) \vee y) \vee x &= x && \% \text{ MER\_1} \\ c(c(x) \vee y) \vee (z \vee y) &= y \vee (z \vee x) && \% \text{ MER\_2} \end{aligned}$$

For comparison, the Robbins 3-basis for  $\mathcal{BA}$  (in terms of join and complement) is the following [12].

$$\begin{aligned} (x \vee y) \vee z &= x \vee (y \vee z) && \% \text{ AJ2} \\ x \vee y &= y \vee x && \% \text{ CJ} \\ c(c(x \vee c(y)) \vee c(x \vee y)) &= x && \% \text{ Robbins} \end{aligned}$$

## 2.2 In Terms of the Sheffer Stroke

This section contain multiequation bases, in terms of the Sheffer stroke, for  $\mathcal{OL}$ ,  $\mathcal{OML}$ ,  $\mathcal{MOL}$ , and  $\mathcal{BA}$ . (There cannot be a basis for  $\mathcal{L}$  in terms of the Sheffer stroke.) We prove each basis equivalent to the corresponding basis in terms of join, meet, and complement with two Otter jobs, and we show independence with Mace2 countermodels.

### 2.2.1 Ortholattices in Terms of the Sheffer Stroke

The following is a 3-basis for ortholattices in terms of the Sheffer stroke.

$$\begin{aligned} (x|((y|z)|(y|z))) &= (y|((x|z)|(x|z))) \quad \% \text{ A\_SS} \\ ((x|x)|(x|y)) &= x \quad \% \text{ B\_SS} \\ (x|(x|x)) &= (y|(y|y)) \quad \% \text{ ONE\_SS} \end{aligned}$$

The following two Otter jobs show that this basis is definitionally equivalent to the (join/meet/complement)  $\mathcal{OL}$  basis {AJ, B1, DM, CC, ONE}.

The following three Mace2 jobs show that the  $\mathcal{OML}$  3-basis  $\{\text{A\_SS}, \text{B\_SS}, \text{OM\_SS}\}$  is independent.

### Countermodel OML-SS-a

```
f(f(x,x),f(x,y)) = x. % B_SS
f(x,f(x,f(x,y))) = f(x,y). % OM_SS
f(A,f(f(B,C),f(B,C))) != f(B,f(f(A,C),f(A,C))). % denial of A_SS
```

			f:	0	1
C: 0	A: 0	B: 1		0	0
				1	1

Table 21: OML-SS-a.out

### Countermodel OML-SS-b

```
f(x,f(f(y,z),f(y,z))) = f(y,f(f(x,z),f(x,z))). % A_SS
f(x,f(x,f(x,y))) = f(x,y). % OM_SS
f(f(A,A),f(A,B)) != A. % denial of B_SS
```

			f:	0	1
B: 0	A: 1			0	0
				1	0

Table 22: OML-SS-b.out

### Countermodel OML-SS-c

```
f(x,f(f(y,z),f(y,z))) = f(y,f(f(x,z),f(x,z))). % A_SS
f(f(x,x),f(x,y)) = x. % B_SS
f(A,f(A,f(A,B))) != f(A,B). % denial of OM_SS
```

			f:	0	1	2
B: 0	A: 1			0	2	2
				1	2	1

  

			f:	2	1	0
B: 0	A: 1			2	1	0
				2	1	0

Table 23: OML-SS-c.out

### 2.2.3 Modular Ortholattices in Terms of the Sheffer Stroke

The following is a 4-basis for modular ortholattices in terms of the Sheffer stroke.

$$\begin{aligned} (x|((y|z)|(y|z))) &= (y|((x|z)|(x|z))) \quad \% \text{ A\_SS} \\ ((x|x)|(x|y)) &= x \quad \% \text{ B\_SS} \\ (x|(x|x)) &= (y|(y|y)) \quad \% \text{ ONE\_SS} \\ (x|(y|(x|(z|z)))) &= (x|(z|(x|(y|y)))) \quad \% \text{ MOD\_SS} \end{aligned}$$

The following two Otter jobs show that this basis is definitionally equivalent to the (join/meet/complement)  $\mathcal{MOL}$  basis {AJ, B1, DM, CC, ONE, MOD}.

Table 27: MOL-SS-d.out

#### 2.2.4 Boolean Algebra in Terms of the Sheffer Stroke

The following is a 2-basis for Boolean algebra in terms of the Sheffer stroke.

$$\begin{aligned} (x|((y|z)|(y|z))) &= (y|((x|z)|(x|z))) \quad \% \text{ A\_SS} \\ ((x|(y|y))|(x|y)) &= x \quad \% \text{ CUT\_SS} \end{aligned}$$

The two Otter job below show that this basis is definitionally equivalent to the (join/meet/complement)  $\mathcal{BA}$  basis  $\{\text{AJ}, \text{DM}, \text{ONE}, \text{CUT}\}$ .

For reference, the simplest multiequation basis for  $\mathcal{BA}$  in terms of the Sheffer stroke is known to be the following [20].

$$\begin{aligned} x|y &= y|x \\ (x|y)|(x|(y|z)) &= x \end{aligned}$$

## 2.3 Finding and Proving the Multiequation Bases

See the primary paper [8].

## 2.4 Are There Simpler Multiequation Bases?

See the primary paper [8].

## 3 Single Axioms

See the primary paper [8].

### 3.1 Generating and Filtering Candidates

See the primary paper [8].

### 3.2 Finite Ortholattices

See the primary paper [8].

### 3.3 Collecting and Applying Filters

We list here five filter sets. The first four, non-OL.A-4, non-OL.B-9, non-OL.C-23, and non-OL.D-14, are all non-ortholattices, meaning that they can be used to eliminate any  $\mathcal{OL}$ ,  $\mathcal{OML}$ ,  $\mathcal{MOL}$ , or  $\mathcal{BA}$  candidate.

The fifth set, non-MOL-OML, consists of nonmodular orthomodular lattices, which can be used to eliminate  $\mathcal{MOL}$  or  $\mathcal{BA}$  candidates.

Table 88: Structure 9 of non-MOL-OML

### 3.4 Trying to Prove That Candidates Are Single Axioms

See the primary paper [8].

### 3.5 Single Axioms for $\mathcal{OL}$ , $\mathcal{OML}$ , and $\mathcal{MOL}$

The single axioms for the varieties under study are the following.

$$\begin{aligned}
 \text{OL-Sh: } & (((y \mid x) \mid (x \mid z)) \mid u) \mid (x \mid ((x \mid ((y \mid y) \mid y)) \mid z)) = x \\
 \text{OML-Sh: } & (((y \mid x) \mid (x \mid z)) \mid u) \mid (x \mid ((z \mid ((x \mid x) \mid z)) \mid z)) = x \\
 \text{MOL-Sh: } & (y \mid x) \mid (((x \mid x) \mid z) \mid (((((x \mid y) \mid z) \mid z) \mid x) \mid (x \mid u))) = x
 \end{aligned}$$

For each, we prove that it is equivalent to the multiequation Sheffer stroke basis for that variety given in Section 2.2.

### 3.5.1 A Single Axiom for Ortholattices

We list in this subsection three Otter proofs:

1. OL-Sh implies the join/complement basis {AJ, B1, DM, CC, ONE}.
2. OL-Sh implies the Sheffer stroke basis {A\_SS, B\_SS, ONE\_SS}.
3. The Sheffer stroke basis {A\_SS, B\_SS, ONE\_SS} implies OL-Sh.

The first two prove essentially the same theorem—either one is sufficient. For the first proof we have rewritten the goal B1 to eliminate the meet operation; this allows a convenient forward proof.

### 3.5.2 A Single Axiom for Orthomodular Lattices

As in the  $\mathcal{OL}$  case, we list three Otter proofs:

1. OML-Sh implies the join/complement basis {AJ, B1, DM, OM}.
2. OML-Sh implies the Sheffer stroke basis {A\_SS, B\_SS, OM\_SS}.
3. The Sheffer stroke basis {A\_SS, B\_SS, OM\_SS} implies OML-Sh.

The first two prove essentially the same theorem—either one is sufficient. For the first proof we have rewritten goals B1 and OM to eliminate the meet operation; this allows a convenient forward proof.

### 3.5.3 A Single Axiom for Modular Ortholattices

The proofs given in this subsection are all in terms of the Sheffer stroke. We have simplified the proof of

$$MOL-Sh \Rightarrow \{A\_SS, B\_SS, ONE\_SS, MOD\_SS\}$$

by presenting it in two stages. First we prove  $x|(x|x) = y|(y|y)$ , which allows us to introduce a constant we call “1” with the property  $x|(x|x) = 1$ . We use this in the second stage. The third proof is

$$\{\text{A\_SS}, \text{B\_SS}, \text{ONE\_SS}, \text{MOD\_SS}\} \Rightarrow \text{MOL-Sh}$$
